Care & Cleaning

When installing a banner, it should be hung in a way so it will not sag. Should the banner become soiled, it can be cleaned using a soft rag and mixture of non-abrasive soap and water. Be sure the banner is completely dry before being stored.

When storing a banner, it should be kept in a clean, dry area where it will not be exposed to direct sunlight or high temperatures. Vinyl banners should be rolled to about a 4 inch diameter tube (never folded) with the lettering facing out. On double-sided banners, we recommend that the exposed hem of the banner faces out when rolled.

Wall Mounted Banners

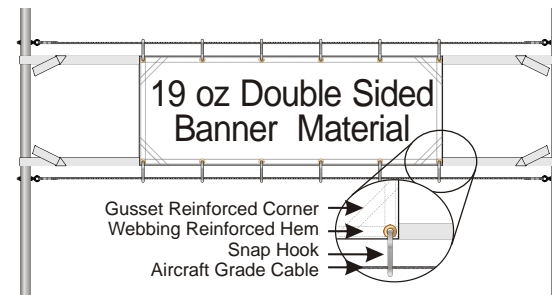

Installation Instructions
Use screws and washers appropriate for the surface that the banner is being mounted to. Fasteners should be placed through grommets every 2-3 feet around the perimeter of the banner, ensuring that it does not sag.

Pole Mounted Banners

Installation Instructions
A banner is like a boat sail in the wind. Be sure that the poles that you are attaching the banner to are strong enough to support the banner. Use webbing, rope, twine, Bungee™ or stretch cords to secure banner to pole. The banner should be removed and stored during periods of high wind or extreme inclement weather.

Across the Street Banners

Installation Instructions
These banners are exposed to extreme environmental conditions. We recommend you consult with and hire a professional to insure proper installation. These banners should be removed and stored during periods of high wind or extreme inclement weather.
